

**YOU ARE CORDIALLY INVITED TO ATTEND A
MURDER MYSTERY PARTY...**

HOSTED BY:

YOU WILL PLAY THE ROLE OF:

DATE:

TIME:

SCENE OF THE CRIME:

OTHER INSTRUCTIONS:

RSVP:

FOR MORE INFORMATION, GO HERE:

www.yourmysteryparty.com/amongthecrew

Mission Firedrake Crew (MFC):

ASH SILVER

Chief Officer

Second-in-charge on the ship and space station, Chief Officer Silver's primary focus is the overall mission success. Ash would assume command of the whole ship in the absence or incapacitation of the commander. Ash has a fierce sense of duty and undying loyalty to Commander Maroon. Ash oversees the Bridge of the spaceship and the Navigation Center of the space station and ensures smooth flight operation and maneuvering.

Ash is the most likable member of the Mission Firedrake Crew (MFC). Ash is always seen with a pet hamster named Frank and has a vast knowledge of the Dark Web. Ash is quick to come up with a joke to lighten the situation. Albeit the jokes are terrible.

OLLY ORCHID

Medical Officer

After serving fifteen years in the US Army as a medic, Olly Orchid ran an Emergency Trauma Unit at a hospital for many years. Justice Brannon recently recruited Olly to be a member of the Mission Firedrake Crew (MFC). Olly has never been in space before but has undergone many hours of training in flight simulators. Olly will report to the Chief Medical Officer, Bing Brown, and work in the med-bay.

Olly tends to make snap judgments about other people but is most often wrong.

NICKY BRONZE

Communications Technician

Nicky Bronze first interned at NASA in Houston. Nicky turned the internship into a full-time position in the communications tower. It wasn't long before this ladder climber joined missions to manage the communication networks that enable spaceflight operations and research. Nicky is part of the Mission Firedrake Crew's engineering division and reports to Tandy Yellow, the Communications Officer.

Nicky is known for taking credit for other people's work. This can be quite annoying if you are working closely with Nicky.

TERRY NAVY

Second Pilot

Terry Navy is the second pilot, also known as the copilot (CP), and has the primary responsibility to assist the first pilot during the spaceship and space station operation. If ever needed, Terry and the rest of the second pilots would convert to combat pilots and maintain the weapon and shield systems. They would then report to the GOB/second officer, Sloan Teal. To date, the SSP has not had a hostile encounter. However, with the current climate – this could change.

Terry is notoriously two-faced and will betray anyone. Terry is exceptionally good at their job, but nobody trusts Terry with secrets of any kind. Terry would do anything to be the first pilot and has said that to many people on numerous occasions.

MAX AQUA

Spaceflight Participant

Max Aqua is a longtime pal of Lord Justice Brannon – a billionaire who owns Brannon Industries - a private space flight corporation that has partnered with the other two organizations (IASA, USSF) to protect The Sphere for the good of the universe. Max is merely interested in the mission and paid top dollar to be a Mission Firedrake Crew (MFC) member as a civilian. Max had to sign many non-disclosure agreements and contracts to be on board the ship and SSP.

Max is extremely charismatic and has no trouble finding someone to do their bidding. However, is this gift of controlling others due to charm or maybe deep pockets? Nevertheless, if Max wants something, Max gets it.

SAM MAROON

Commander

Commander Maroon has the duty of overall mission success, the crew's wellbeing, the spacecraft's safety, and oversight of ascent and entry. Sam is the pilot in command during launch and Earth return. The commander is responsible for the spaceship and space station's safe and efficient operation. Sometimes referred to as The Captain, all persons on board, including officers, crew, and guests, are under Sam's authority.

Sam's a born leader with a commanding voice and demanding personality. This spaceship commander is not one to double-cross, but someone among the crew is taking that chance.

CORY CHOCOLATE

Research Scientist

Cory Chocolate is a former military and private-lab research scientist. Cory has over two hundred published journal articles in the field of biochemistry. Cory made the right connections at a fundraising event for pet shelters and was offered a spot on the Mission Firedrake Crew as a civilian scientist. Cory accepted the job and soon took to the NASA flight simulators and underwent the rigorous physical and mental exams needed for a space mission.

Cory will report to Sidney Lime, the Chief Science Officer.

Cory takes everything that anyone says personally. Be careful, as this super-sensitive scientist will burst into tears at any hint of drama.

NORRIE GRAY

Aerospace Engineer

Norrie Gray has over twenty years of experience with designing and building spacecraft for NASA. Justice Brannon hired Norrie a few years ago to join the space exploration team at Brannon Industries. This will be Norrie's first adventure in space. Norrie will report to Jo-Jo Scarlet, the Chief Engineer.

Norrie Gray is known for making intense eye contact with others during conversation. Norrie explains they are listening to what you are saying.

SHANNON PEACH

Life Support Engineer

Shannon Peach recently graduated with a Ph.D. in biochemical engineering from an Ivy League college, Yarley Technical Institute. Shannon is an intern at NASA but will become a Mission Firedrake Crew member, reporting to the Lead Life Support Engineer, Farren Green.

Shannon is always pointing at everything – even at others during conversation. This can become a bit peculiar during long chats.

VAL INDIGO

Spacecraft Engineer

Val Indigo is a known prankster at NASA who doesn't take much of anything seriously – besides spacecraft engines. Val is one of the best spacecraft engineers globally, so everyone puts up with Val's antics.

Val is a member of the Mission Firedrake Crew and will report to the Chief Engineer, Jo-Jo Scarlet.

Val tends to giggle at everything – even when nobody can see the humor in it. Val also will start whistling if things get quiet.

SIDNEY LIME

Chief Science Officer

Sidney Lime is an astrobiologist who is primarily responsible for coordinating the science department of the program. Sidney reports to the Second Officer, Sloan Teal, and must scrutinize and theorize explanations to extraordinary or seemingly mystifying situations.

In a medical emergency, the CSO will work with the CMO to get to the bottom of the crisis onboard. Sidney also oversees many research projects dealing with extraterrestrial beings and materials.

Sidney has an overly analytical approach to human behavior, which makes Sid seem like a charming android. This science nerd is shy, reserved, and gets extremely nervous during meetings.

SKYE BLUE

First Pilot

Skye Blue is the First Pilot – also known as the Pilot-In-Command (PIC). As the central controller of the helm, Skye is detail-oriented and focused during flights and other maneuvers. While the ship and space station are most often controlled via autopilot (AI), an experienced pilot is critical for launching, docking, landing, and, when needed, combat maneuver. Skye is a professional pilot with over 4,000 hours of logged flight time.

Skye's the team's detective and is usually the one who will get to the bottom of things. Skye is stoic, somewhat detached from humanity without emotion but is excellent at piecing seemingly impossible things together.

BING BROWN

Chief Medical Officer

Dr. Bing Brown is the designated head of medical services for the crew – including the med-bay suite and life support station. Dr. Brown is a general surgeon who serves to advise the senior officials on the crew's matters of health when it comes to the mission as a whole. Bing has a medical/surgical suite in the SSP called the med-bay, but for the most part, it is quiet without much going on. One will find many of the med-bay staff playing solitaire, watching recorded shows, or taking naps on any given day.

Dr. Brown has a horrible sense of direction and is continually getting lost. Maybe by the end of the six-months at the space station, the doc will figure out where things are?

MORGAN FUCHSIA

Head Scientist

Morgan Fuchsia is the head scientist, reporting to the Chief Science Officer, Sidney Lime. The science department includes data analysts, cybersecurity specialists, biologists, astrophysicists, astrobiologists, and psychologists. Both a diplomat and a scholar,

Morgan spends every waking hour in the space station's laboratory and manages over fifteen research protocols.

Back on Earth, Morgan has ten children and has been married for over twenty years. Morgan tends to be serious, and it is nearly impossible to make this scientist so much as crack a smile, let alone let loose enough to laugh.

JO-JO SCARLET

Chief Engineer/Third Officer

Jo-Jo Scarlet is the Chief Engineer and Third Officer of the crew, which means s/he is fourth-in-command. If something were to happen to the commander, chief officer, and second officer, Jo-Jo would assume the ultimate authority and command of the SSP. Jo-Jo is known as the miracle worker of the station and heads the engineering department. Dr. Scarlet is responsible for the engine room's efficient operation and maintenance of all mechanical equipment on the ship. In other words, Jo-Jo has a duty to the overall health and continued running of the ship and space station.

Jo-Jo has Ph.D.s in Mechanical, Chemical, and Electrical Engineering and a master's degree in psychology.

However, Jo-Jo is on-point with their assigned duties but will be the first to miss a meeting and sleep late. If Jo-Jo's not at their workstation, you can bet Jo-Jo is slacking off and not doing any tasks at hand.

FARREN GREEN

Lead Life Support Engineer

Farren Green reports to the Chief Medical Officer and is responsible for the maintenance of the ship's life support systems, including oxygen generation and atmospheric percentages, as well as air circulation. Farren also controls the water supply, heating, and organic waste disposal.

With an IQ beyond a genius, Farren is potentially the wisest member of the team and is one of the crew's most dedicated and hard-working members. Unfortunately, nobody believes much of what Farren has to say, as s/he continually tells tall tales to make themselves look more appealing and exciting.

TANDY YELLOW

Communications Officer

Tandy Yellow is the Communications Officer for the Mission Firedrake Crew (MFC). Tandy oversees internal and external radio communications providing telemetry and scientific data links between the station and mission control centers. Radio links are used during most procedures and maneuvers at the SSP. Tandy provides video and audio communication between crew members, as well.

Tandy reports to the Chief Engineer Officer.

Tandy is energetic, hardly needs to rest, and has a wildcard behavior that is quite unpredictable. Maybe Tandy's excess energy leads to all of the misdirected actions?

SLOAN TEAL

Second Officer

Sloan Teal represents the United States Space Force aboard the ship and the SSP. Sloan's voice of reason is also referred to as the General on Board (GOB) and mediates any conflicts that arise. Military orders are often classified and could contradict the commander's orders, but while on the SSP mission, Sloan is to serve Commander Maroon at all costs. Sloan is the third-in-command and will assume the authority of the SSP in the absence or incapacitation of both the commander and the chief officer.

A quiet leader, Sloan is secretive and known to be stealthy. Sloan is the problem solver of the crew and is often found lurking in the shadows and listening through the air vents. Sloan might be paranoid or just nosy – nobody knows, but it's mysterious.
